

Product Data Sheet

ALOA LISTERIA AGAR BASE (L. MONO DIFFERENTIAL AGAR BASE) Product No. GB-DCM-00021-1A

Product Description

Listeria monocytogenes is a gram-positive foodborne human pathogen responsible for serious infections in pregnant women that may ultimately result in abortion, stillbirth, birth of a child with neonatal listeriosis and meningitis or primary bacteremia in adults and juveniles. The pathogenicity of Listeria ivanovii for humans is uncertain. Since L. monocytogenes and L. innocua have similar biochemical properties, they cannot be differentiated on traditional media. L. mono Differential Agar Base is based on the formulation of Ottoviani and Agosti for the selective and differential isolation of Listeria monocytogenes from food and animal feeds which is adopted by ISO Committee. Listeria species hydrolyse the chromogenic substrate which produces green coloured colonies. Differentiation of Listeria monocytogenes from other Listeria species is based on phosphatidylinositol specific phospholipase C (PIPLC) activity. Phospholipase C enzyme hydrolyses the purified substrate added to the medium resulting in an opaque halo around Listeria monocytogenes colonies.

Product Specifications

Ingredients	Gms / Ltr		
Meat peptone	18.000		
Casein enzymic hydrolysate	6.000		
Yeast extract	10.000		
Sodium pyruvate	2.000		
Glucose	2.000		
Magnesium glycerophosphate	1.000		
Magnesium sulphate	0.500		
Sodium chloride	5.000		
Lithium chloride	10.000		
Disodium hydrogen phosphate anhydrous	2.500		
Chromogenic substrate	0.050		
Agar	15.000		

Microorganism	ATCC	Inoculum (CFU)	Growth	Recovery	Colour of	PIPLC Activity	Incubation Temperature	Incubation Period
Candida albicans	10231	>=103	Inhibited	0%	-	-	35-37°C	24-48 Hours
Enterococcus faecalis	29212	>=103	Inhibited	0%	-	-	35-37°C	24-48 Hours
Escherichia coli	25922	>=103	Inhibited	0%	-	-	35-37°C	24-48 Hours
Listeria innocua	33090	>=103	Luxuriant	>=70%	Greenish- blue	Negative	35-37°C	24-48 Hours
Listeria grayi	19120	50-100	Luxuriant	>=70%	Greenish- blue	Negative	35-37°C	24-48 Hours
Listeria ivanovii	19119	50-100	Luxuriant	>=70%	Greenish- blue	Positive, opaque halo around the colony exhibiting phophatidylinosit ol specific phospholipase acivity	35-37°C	24-48 Hours
Listeria monocytogenes	19112	50-100	Luxuriant	>=70%	Greenish- blue	Positive, opaque halo around the colony exhibiting phophatidylinosit ol specific phospholipase acivity	35-37°C	24-48 Hours
Listeria seeligeri	35967	50-100	Luxuriant	>=70%	Greenish- blue	Negative	35-37°C	24-48 Hours
Listeria welshimeri	43549	50-100	Luxuriant	>=70%	Greenish- blue	Negative	35-37°C	24-48 Hours
Pseudomonas aeruginosa	27853	>=103	Inhibited	0%	-	-	35-37°C	24-48 Hours

STORAGE

Dehydrated powder, hygroscopic in nature, store in a dry place, in tightly-sealed containers between 25-30°C and protect from direct sunlight. Under optimal conditions, the medium has a shelf life of 4 years. When the container is opened for the first time, note the time and date on the label space provided on the container. After the desired amount of medium has been taken out replace the cap tightly to protect from hydration. Product Deterioration: Do not use if they show evidence of microbial contamination, discoloration, drying or any other signs of deterioration.

DISPOSAL

After use, prepared plates, specimen/sample containers and other contaminated materials must be sterilized before discarding.

Product Deterioration

Do not use if they show evidence of microbial contamination, discoloration, drying or any other signs of deterioration.

PRINCIPLE

Meat peptone, casein enzymic hydrolysate, yeast extract and sodium pyruvate provide essential growth nutrients and nitrogenous substances. Glucose is the fermentable carbohydrate. Sodium chloride maintains osmotic equilibrium. Phosphate buffers the medium. Lithium chloride and added selective supplements inhibit accompanying microflora and allow the growth of Listeria species.

INSTRUCTION FOR USE

- Dissolve 36.02 grams in 460 ml distilled water.
- Heat to boiling to dissolve the medium completely.
- Sterilize by autoclaving at 15 psi pressure (121°C) for 15 minutes. Cool to 45-50°C.
- Aseptically add sterile contents of 1 vial of L. mono Enrichment Supplement I and sterile rehydrated contents of L .mono Selective Supplement II. L .mono Selective Supplement II.
- Mix well and pour into sterile Petri plates. Warning: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapours. On contact with skin wash with plenty of water immediately.

QUALITY CONTROL SPECIFICATIONS

Appearance of Powder: Cream to yellow homogeneous free flowing powder.

Appearance of prepared medium: Yellow to light amber coloured clear to slightly

opalescent gel forms in Petri plates.

PH (at 25°C): 6.9±0.2

This product is for research use only.
